

If you find yourself asking these questions or they still remain unclear:

- Is my software of better/worse quality than my competition?
- Are my internal assessments correct?
- What metrics are we tracking and are we doing something with them?
- Are my test resources optimized & effective?
- How much risk are we incurring?
- When will the number of production defects decrease?
- Major defects are causing slow product/consumer adoption?
- How did we maximize our regression coverage?

MindTree Quality & Test Consulting can help you in finding the answers and even better the approach when the answer is “I do not know”.

Auditing the Software Test Process

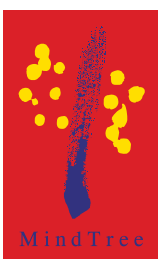

Auditing the test process enables management to understand/measure if the processes are being adhered to. In the case where process deviation was accepted, how were the risks & impacts measured and communicated. An audit will uncover what triggers and early warning indicators are set in place to proactively mitigate risk. Some examples of why organizations seek audits:

- Consistent, relatable, reliable execution
- Compliance to standards (ISO, CMM, etc... where applicable)
- Resource optimization
- Protect legal liability and detect or prevent fraud
- Improve efficiency and effectiveness

Documents/artifacts reviewed would include:

- Test Strategy
- Test Plans Estimation & Cycles
- Traceability & Requirements
- Test Case Design & Development
- Test Coverage
- Test Execution Reports
- Defect Reports/Trends
- Metrics
