

MINDTREE

Overview

Mindtree is a leading IT services provider headquartered in Warren N.J. The firm made a revenue of \$116 million in 2018 and has over 2,200 resources dedicated to the continuous testing practice with a large resource base focused on functional test execution automation (UI, data driven, API), test design automation and risk-based automation. It has more than 34 clients along with innovation labs in Bangalore and Pune.

Strengths

Automation through testing lifecycle: Mindtree offers automation across the testing lifecycle for practices such as test design, defect logging, test orchestration, environment provisioning and test activities through bots. It also leverages ML techniques to analyze past runs and estimate the time for the completion of the test suite.

Test Transformation Experience framework: Based on the “starting left” approach, this framework enables enterprise customers to evaluate their adoption and readiness on continuous testing and the DevOps tool chain.

Accelerators for scale and expert delivery: Mindtree offers accelerators for continuous testing and test automation such as DTEP3.0 (dynamic test engineering platform), MIST (Mindtree Integrated Script less Test Automation framework), BDD automation framework, continuous performance evaluation engine (CPE) and JIRA chatbot, combined with AI-driven defect prediction and analysis to accelerate the test journey.

Caution

Mindtree has a strong application practice, but the percentage of its standalone engagements is less when compared to peers.

2019 ISG Provider Lens™ Leader

Mindtree’s continuous testing practice serves a host of use cases and is well supported by resources trained on variety of tools and proprietary frameworks. These capabilities make the firm a leading player in this domain.
