Making Global Airline Travel Safe and Hassle-Free with Mindtree's Digital Health Passport

Airlines across the globe are looking for effective solutions for safe reopening with stringent hygiene standards, strict safety measures, usage of digital health passports, mobile apps, and other tech solutions to transform the travel experience for passengers. This whitepaper discusses the pandemic’s impact on the airline industry and how global airlines are adopting new solutions to offer seamless, safe travel experiences to flyers.

Immersive Technologies Augmenting Customer Experiences for Retailers

The retail landscape is becoming more competitive, forcing players to keep pace. The pandemic is influencing buying behavior and consumer decisions to an unprecedented extent. There is an upsurge in demand for artificial reality (AR) applications because of innovative use cases that have been made possible for global brands. Read on to know more about how applications of AR for virtual try-ons and furnishing, for instance, have created a huge impact for brands looking to increase their brand value.
Blockchain: Exploring Possibilities for Capital Markets

Characteristics such as immutable, auditability, shared database, multiple entities being authorized to make changes to the database, absence of trust and disintermediation makes the application scope of DLT (Distributed ledger technology) wider and deeper for the financial markets. Read on to know more.
